[FEATURE] ext:install Relaxed permission check

The document root folder may not have correct permissions and they can not be fixed if the owner is not the executing webserver user.

This is a common issue during installation, currently the first step breaks if permission on document root are not 2770 and the folder is not owned by the executing webserver user.

The patch adds a new option "targetPermissionRelaxed" to DirectoryNodes and uses it on the RootNode to lower the severity if permissions are not correct. The installation will proceed then as long as sub folders can be created.
