[BUGFIX] ext:install Better error handling in first folder step

During installation it may happen that the folder structure reports errors during creation, but still creates the main folder structure. This is the case for example if the document root or fileadmin is a link and not a directory. In those cases the installer does not create a LocalConfiguration and shows the first step again. It will stop with a "ENABLE_INSTALL_TOOL" file missing message afterwards.

This is better sanitized with the patch: If the folder structure reports errors but still successfully created a typo3conf folder, the LocalConfiguration is also created and the next step is called after redirect.

Furthermore, two possible warnings are caught in the folder structure and adapted status messages are created.
