<b>Subject:</b>	Overriding properties doesn't work		
<b>Description</b>			
<p>Consider a Page object with a title property:</p> <pre>page = Page</pre> <p>Rendering this object would fetch the <code>page.title</code> from the domain model and display it. However, it is not possible to override this property:</p> <pre>page = Page page.title = "My own title"</pre> <p>The string "My own title" won't be used and the domain model's title will still be used instead.</p>
