TYPO3.Form - Feature # 52481

Status:	Resolved	**Priority:**	Should have
Author:	Thomas Allmer	**Category:**	
Created:	2013-10-02	**Assigned To:**	Bastian Waidelich
Updated:	2013-10-29	**Due date:**	
Subject:	Translations for Error Message should be easily changed		

Description

currently you have to copy
Packages\Application\TYPO3.Form\Resources\Private\Form\Layouts\Field.html

edit this line{error -> f:translate(id: error.code, arguments: error.arguments, package: 'TYPO3.Form', source: 'ValidationErrors')}

TYPO3.Form => <Vendor.Package>

use your own layout

    TYPO3:
      Form:
        presets:
          default:
            formElementTypes:
              'TYPO3.Form:Base':
                renderingOptions:
                  layoutPathPattern: 'resource://<Vendor.Package>/Private/Form/Layouts/{@type}.html'

and THEN you can use your own xlf files in
Packages\Sites\<Vendor.Package>\Resources\Private\Translations\<language>\ValidationErrors.xlf

a simpler approach would be nice. Maybe just introduce a setting that will be used within Field.html... something like
ErrorTranslationPackage: 'TYPO3.Form'

[!!!][FEATURE] Configurable Translation-Package

This change makes it possible to easily change the package that is
used to load ValidationError-messages from. This has been cumbersome
before.

By default, error messages will now be loaded from TYPO3.Flow (file
``Resources/Private/Translations/en/ValidationErrors.xlf``), but this
can be changed by setting the new ``translationPackage`` rendering
option::
    TYPO3:
      Form:
        presets:

```
        'somePresetName':
          formElementTypes:
            'TYPO3.Form:Base':
              renderingOptions:
                translationPackage: 'Some.OtherPackage'
```

This can even be changed for single FormElements now.

This change is breaking if you have a custom Field.html layout, you need
to make sure::

    package: '{element.renderingOptions.translationPackage}'

is used there for the ``f:translate`` call.
