

Core - Bug # 52557

Status:	Under Review	Priority:	Should have
Author:	Sascha Egerer	Category:	Install Tool
Created:	2013-10-06	Assigned To:	
Updated:	2014-12-08	Due date:	
TYPO3 Version:	6.2		
PHP Version:			
Complexity:			
Is Regression:	No		
Sprint Focus:			
Subject:	Show message and disallow modification of non DefaultConfiguration values in install tool		
Description			
<p>If you override a setting in the AdditionalConfiguration.php the value is displayed in the install tool. If you change the value you get a positive message that it has been changed. But if you look again in the install tool the "old" value is displayed again. This is because the install tool only writes to the LocalConfiguration which is then overwritten by the AdditionalConfiguration.php.</p> <p>There should be a notice that the value has been changed outside of the LocalConfiguration and therefore can't be changed in the install tool. The field should also be disabled so it can't be changed.</p> <p>Values that are not part of the DefaultConfiguration should also be not editable and a message should be displayed that this setting is not part of the default TYPO3 configuration.</p>

There should be a notice that the value has been changed outside of the LocalConfiguration and therefore can't be changed in the install tool. The field should also be disabled so it can't be changed.

I confirm this should be added to prevent confusion

Values that are not part of the DefaultConfiguration should also be not editable and a message should be displayed that this setting is not part of the default TYPO3 configuration.

Do you have any arguments why those options shouldn't be editable?

AFAIK they have not been saved by the install tool if they are not part of the DefaultConfiguration. But i'm not sure anymore.
