Updated:	2014-08-01	Due date:	

Has patch: No

Subject: Create an UnlessViewHelper as opposite to the IfViewHelper

Description

Sometimes the IfViewHelper syntax is quite verbose if you only want to do something on "else":

```
<f:if condition="...">
  <f:else>...</f:else>
</f:if>
```

As an alternative we discussed a new "UnlessViewHelper" in IRC to shorten this:

```
<f:unless condition="...">...</f:unless>
```

The only difference to the IfViewHelper is the negation of the condition.

This helps for example shortening the syntax for a ForLoop with condition for no objects from:

```
<f:if condition="{objects}">
  <f:then>
    <f:for each="{objects}" as="object">
      ...
    </f:for>
  </f:then>
  <f:else>No objects found</f:else>
</f:if>
```

to:

```
<f:for each="{objects}" as="object">
  ...
</f:for>
<f:unless condition="{objects}">No objects found</f:unless>
```

Patch set 6 for branch **master** has been pushed to the review server.
It is available at <https://review.typo3.org/24504>

#5 - 2013-10-27 11:57 - Anja Leichsenring

I am not sure this is an issue here, but there is no shorthand syntax possible with this kind of implementation. CMS Fluid will not accept such a shortcoming, we work on a different solution enabling shorthand syntax.

#6 - 2014-08-01 09:02 - Gerrit Code Review

Patch set 4 for branch **master** of project **Packages/TYPO3.Fluid** has been pushed to the review server.
It is available at <http://review.typo3.org/31707>
