Subject:	Add isConnected() to Persistence interface		

Description
Change https://review.typo3.org/#/c/24609 introduced and isConnected() method to the roleRepository to verify if the repository can actually be used for fetching and storing data. In the comments of the change it was suggested to move this method up in the class hierarchy and make it api. As this is still not fully decided and the bugfix has to be merged we will push this later on based on this ticket. Basically the following should be decided: - Should it be api - Should it be added to an interface - To which interface When this method is moved up it should of course be removed from the roleRepository

[TASK] Move isConnected from role repository to persistence manager

To make isConnected api, we have to move it to some central

place. The persistence manager seems to be a lot better place,

than the persistence repository, as it is not reference as much

in user code.

Resolves: #52846

Releases: master
