

TYPO3.Neos - Bug # 52914

Status:	Closed	Priority:	Should have
Author:	Fedir RYKHTIK	Category:	
Created:	2013-10-17	Assigned To:	Bastian Waidelich
Updated:	2013-12-11	Due date:	
Subject:	Class TYPO3\Flow\Composer\InstallerScripts is not autoloadable, can not call post-package-install script		
Description			
<p>Hi guys,</p> <p>I'm trying to install TYPO3 Neos 1.0 alpha 6 after the tutorial, proposed on http://neos.typo3.org/download.html</p> <p>During installation there are lots of messages "Class TYPO3\Flow\Composer\InstallerScripts is not autoloadable, can not call post-package-install script" appears.</p> <p>The log is in the attachment.</p> <p>My system config :</p> <p>Ubuntu 12.04 LTS PHP 5.4.6-1ubuntu1.4 (cli) (built: Sep 4 2013 19:36:09) Composer version 34dd0e2850b20f6d9e40c9ca6024629cdc1a9aaf 2013-10-16 16:35:44</p> <p>A similar anomaly was detected previously with old version of composer, but it's seems to be resolved. I tried patched version of composer, but messages appears anyway.</p> <p>Looks like it's anormal behavior. Could You check, please.</p> <p>Best Regards, Fedir</p>

History

#1 - 2013-10-19 11:13 - Oliver Eglseder

I've got the same issue after cloning the latest git Flow/Distribution/Base.

I have tried 'composer install' as well 'composer install --dev'

on my Windows 7 Pro 64-bit and on my Debian 7.1 64-bit

Composer version bfc234574fee192a581b2bc6a4a9cea9311de8b8

The message appears after all symfony and doctrine packages.

Apart from the errors i could kickstart a package and open the Website.

I think this Issue belongs to <http://forge.typo3.org/projects/package-typo3-flow>

Update:

Composer update on existing Neos/Distributions/Base returns

"Method TYPO3\Flow\Composer\InstallerScripts::postPackageUpdateAndInstall is not callable, can not call post-package-update script"

on all checkouts

Update:

Review: Rens Admiraal Oct 11 12:30 PM

Patch Set 4: Verified+2 Code-Review+1

Works (although the install shows warnings about the script not being callable for all packages installed before Flow ofc.)

Problem is known but still got merged?
