| Subject: | New Site package should depend on neos not on flow | | |
| Description | | | |
| <p>Hey,</p> <p>I run into some troubles trying to override a TYPO3.Form setting within my Site package Settings.yaml.</p> <p>The load order of packages was wrong so that TYPO3.Form was loaded after my package and by that overriding my changes.</p> <p>The cause of this problem was, that the new created site package depends on TPYO3.flow and not on TYPO3.Neos.</p> <p>This bug is very easy to fix and a big pain to find.</p> | | | |

Ok after taking a deeper look it is not that trivial to fix. I guess a extended PackageManger is needed because the require part of the composer manifest is hardcoded in TYPO3\Flow\Package\PackageManager on line 488.
