[BUGFIX] Classes without namespace create invalid proxy code

This change makes classes without namespace create proper proxy class code, by optionally skipping the namespace declaration.

Before such classes would create an empty namespace statement, which resulted in syntax errors, i.e.:

```
namespace ;
```

=> "syntax error, unexpected ';', expecting T\_STRING or T\_NS\_SEPARATOR or '{' in [filename]"

A real example would be this:

### #2 - 2013-10-18 11:53 - Alexander Berl

Should be trivial to fix with an if condition. See Object/Proxy/ProxyClass::render() line 195 ff.:

```
$classCode = "namespace $namespace;\n" .
```
