

## TYPO3 FormBuilder - Bug # 53042

<b>Status:</b>	New	<b>Priority:</b>	Should have
<b>Author:</b>	Lukas Ciszewski	<b>Category:</b>	
<b>Created:</b>	2013-10-22	<b>Assigned To:</b>	Lukas Ciszewski
<b>Updated:</b>	2014-01-21	<b>Due date:</b>	
<b>Subject:</b>	Preview should work on installation without vhost (with path in URL)		
<b>Description</b>			
<p>When clicking on the preview button a new window is opened with a wrong URI. This happens because the TYPO3.FormBuilder.Configuration.endpoints address is used with a '/' in front as the param to window.open. When on a development installation without a vhost, and therefore a base href with a path, the path is ignored.</p> <p>Possible solution:</p> <ul style="list-style-type: none"><li>- make the address relative by removing the '/' in app.js:492</li><li>- let TYPO3.FormBuilder.Utility.getUri() respect the base href in the html</li></ul>

Even when using FormBuilder on a dev installation with a vhost, the same error occurs.
