Core - Bug # 53120

Status:	New	**Priority:**	Should have
Author:	Stefan Neufeind	**Category:**	
Created:	2013-10-25	**Assigned To:**	
Updated:	2015-01-18	**Due date:**	
TYPO3 Version:	6.2		
PHP Version:			
Complexity:			
Is Regression:	No		
Sprint Focus:			
Subject:	Proper fetching of records in a language in the fallback-chain		

Description

- Image a record that **only** exists in language 1.
- Fallback is 2 -> 1 -> 0
- Usually in the core records for IN (0, -1) are fetched and then overlays performed.
- In some cases also the current language is fetched (2 here) because there might be records which only exist in 2 and have no 0.

What we currently miss in various places are records that only exist in 1 (more general: only in languages inside the fallback-chain, not existing in 0 or the current language).

This turned up during the review of https://review.typo3.org/23905 but is imho a too general problem in various areas of the core as to fix it just in that one patch. We might need some tool-function to create a proper condition (like with enableFields or so).
