

TYPO3.Neos - Bug # 53264

Status:	New	Priority:	Should have
Author:	Andreas Sander	Category:	Frontend
Created:	2013-11-01	Assigned To:	
Updated:	2013-11-01	Due date:	
Subject:	Overlapping click events on an element in the structure sidebar		
Description			
<p>I use Mac OS X 10.9 (Mavericks), Chrome v. 30.0.1599.101 and the last Neos Alpha 7.</p> <p>When I create an element with the help of the buttons at the top of the structure sidebar, the element is created.</p> <p>Everything is fine. But when I click on the freshly added element (linked to /home/main/nodeXYZ) the behavior is strange:</p> <ul style="list-style-type: none">- Often a redirect to this Node URI occurs and it's showing me the right inspector context, based on the element I clicked on. But I further stepped into a new level, regarding the structure tree, which I didn't want.- Sometimes I get redirected to the root page <p>But sometimes it works as expected: The clicked element is outlined inside the view and I get the right inspector context to edit the element.</p>

Short remark:

When I click on the same elements inside the page instead, everything is great! The weird behavior only appears by clicking on the elements inside the structure sidebar.
