TYPO3 Version:	6.2
PHP Version:	5.4
Complexity:	
Is Regression:	No
Sprint Focus:	

Subject:	Installer - file and folder permissions detection

Description

I´ve setup the new 6.2 beta on a debian squeeze with php 5.4.20.

The installtool generates typo3temp folder with permissions like drwxrws but my system relies on suPHP and needs 644 / 755 drwxr-sr-x settings. I could imagine that this can also be true on several other systems.

I think it would make sense to have the ability to change this behavior in initial-installtool or it should determine the rights handling on it´s own or at least give advice to change [BE][fileCreateMask] and [BE][folderCreateMask].

Cheers

David
