

TYPO3.Neos - Bug # 53347

Status:	Resolved	Priority:	Should have
Author:	Bastian Waidelich	Category:	
Created:	2013-11-05	Assigned To:	Bastian Waidelich
Updated:	2013-12-04	Due date:	
Subject:	Revise Neos Routes		
Description	<p>The Routes.yaml of the TYPO3.Neos package contains some too generic rules. This leads to the situation that the ".html" suffix can be omitted from all frontend URIs creating lots of duplicate cache entries and "non-canonical" URLs.</p> <p>Besides, we use <code>appendExceedingArguments</code> far too often restricting the future flexibility.</p> <p>We should make use of new Routing features such as "nested subRoutes" and "HTTP method constraints" to make the routing setup easier to adjust</p>

[TASK] Refactor node RoutePartHandler

The FrontendNodeRoutePartHandler does quite a lot, yet it's tests are really sparse.

This patch set refactors the route part handler and increases the code coverage of the corresponding unit tests from 20% to 97%.

It also removes the singleton scope annotations because RouteParts are not stateless.

[BUGFIX] Make "logout" a POST request

Previously the logout was triggered by a link in the user menu resulting in a GET request.

With this change the link is replaced by a small form creating a POST request instead.

[BUGFIX] URLs must point to document nodes

Currently the ``FrontendNodeRoutePartHandler`` matches and resolves any node independently from its type.

This leads to the situation that one can browse content element nodes directly breaking menus and styling.

This change adjusts the RoutePartHandler to only accept NodeTypes extending ``TYPO3.Neos:Document`` such as ``TYPO3.Neos:Page`` or custom document node types.

It also adjusts the structure inspector that used to create links for every node.
