History

#1 - 2013-11-07 21:26 - Georg Ringer

- Tracker changed from Bug to Feature

certainly a feature and not a bug to have an alternative rendering method

#2 - 2013-11-08 07:40 - Kay Strobach

mhmm, for me it's a bug, as it just works on desktops this way, neither android nor IOS show the video with the object rendering :(

#3 - 2013-11-08 08:52 - Georg Ringer

mobile gave up flash support, so the "bug" is there ;)

so you wanna make a patch for this? and don't forget that this is not only about youtube but also other video hosters who got iframe support

#4 - 2014-06-20 14:14 - Gerrit Code Review

- Status changed from New to Under Review

Patch set 1 for branch **master** of project **Packages/TYPO3.CMS** has been pushed to the review server.

It is available at <https://review.typo3.org/30923>

#5 - 2014-06-20 18:32 - Markus Hölzle

I have just checked the other video providers: Dailymotion, Vimeo, ClipFish, Liveleak, Metacafe, MyVideo now use iframes.

Sevenload and Google Video no longer exist.

Only Veoh still uses flash.

All providers should be updated because it's necessary to embed videos on smartphones and for responsive layouts.

#6 - 2014-06-20 21:10 - Gerrit Code Review

Patch set 2 for branch **master** of project **Packages/TYPO3.CMS** has been pushed to the review server.

It is available at <https://review.typo3.org/30923>

So this still means that when inserting a YouTube video, it will not play on Android/iOS?

I just tried it - and that seems to be the case.
