Subject:	Extension manager - removed extension stays in PackageStates.php as inactive

Description

I have installed and uninstalled extension (pt_extbase), than removed it from server. If i want now upload this extension on the server again it is impossible as EM returns error message "Extension is already available and overwriting was not enabled." (see the attached image).

I'm not sure how this all works now internally, but inside typo3conf/PackageStates.php i have existing entry:

'pt_extbase' =>
  array (
    'state' => 'inactive',
    'packagePath' => 'typo3conf/ext/pt_extbase/',
    'classesPath' => 'Classes/',
),

So, it looks like EM checks if package is listed but not if it exists on server?

If i check "Overwite" checkbox in upload form, the extension is uploaded without any problems and installed.

[BUGFIX] Removed extension stays in PackageStates file

Deleting an extension in the Extension Manager doesn't delete
the entry in PackageStates file.

Use the package manager to delete the extension. This will take care of
linked extensions (just remove the link) too.
The package manager will take care to remove the entry from the
PackageStates file.

If an extension is not listed in the PackageStates file (e.g. because
we uploaded it via FTP and forgot to clear the system caches),
directly remove the folder.

[BUGFIX] Disable removal of installed extensions

This patch removes the deletion possibility for installed extension in
the list view of the extension manager. Furthermore the javascript can
be adopted as the check for installed extensions can be removed as well.
