Subject:	Nested Child Nodes for new node creation		
Description			
<p>hey,</p> <p>it would be great if we could define a node type that automatically creates nested child nodes. For example a page type that automatically creates a main content collection (as it does atm) which is repopulated with a two column layout node.</p> <p>Could look something like this in NodeTypes.yaml:</p> <pre>'MyPackage:BlogPage': superTypes: ['TYPO3.Neos:Document'] childNodes: main: type: 'TYPO3.Neos:ContentCollection' childNodes: twoColumnLayout: type: 'TYPO3.Neos.NodeTypes:TwoColumn'</pre> <p>What do you think?</p>
