

TYPO3 Flow Base Distribution - Bug # 53790

Status:	New	Priority:	Must have
Author:	Kay Strobach	Category:	
Created:	2013-11-20	Assigned To:	
Updated:	2013-11-20	Due date:	

Affected Flow version: Git master

Subject: Translation handling in Flashmessages is inconsistent to Validation errors

Description

Example code:

Current of generating a flashmessage with an argument:

```
$this->addFlashMessage('This id %1s is already present in the Translation file', "", Message::SEVERITY_NOTICE, array($translationLabel->getLabelId()));
```

Problem is that the translation handler queried for e.g.:

```
This id oierjgu9her9gheru is already present in the Translation file
```

This makes translation of dynamic flashmessages impossible.

The better way would be to translate flashmessages similar to Validation errors:

```
$this->addFlashMessage('This id {0} is already present in the Translation file', "", Message::SEVERITY_NOTICE, array($translationLabel->getLabelId()));
```

Would result in querying the translation handler with

```
This id {0} is already present in the Translation file
```

This can be easily translated and i would be satisfied ;)
