<b>Subject:</b>	Guide Migrating from TYPO3 6.X to NEOS		
<b>Description</b>			
<p>Hey guys,</p> <p>this is my first issue suggestion on your fine Redmine System here and I hope it is in the right place.</p> <p>It would be a big help for users to know how to make the move from Typo3 4.5 or 6.x to NEOS with pros and cons. This should not take more than a few hours for someone that knows both systems well.</p> <p>Another suggestion is to create use cases for 6.x vs. NEOS and finally to provide sample websites based on NEOS or to list well-known sites that plan to make the move.</p> <p>Thanks for giving it some thought!</p> <p>Did not add any watchers yet since I'm not quite sure who's doing what yet and didnt want you to get spammed full of messages!</p> <p>Best, Andrew</p>
