[TASK] Introduce Content TypoScript object

Introduces a new TS object ``TYPO3.Neos:Content`` that should be used as base for all elements that can be selected in the backend.

This deprecated ``TYPO3.Neos:Template`` in favor of ``TYPO3.TypoScript:Template`` or the new Content object.

Note: This object inherits from TYPO3.TypoScript:Template because most Content Elements are expected to render a Fluid Template. If this is not the case, a custom Content Element should still extend from this prototype and change the ``@class`` property as it's done for the ``TYPO3.Neos:Plugin`` object for example.
