Subject:	Rename and move FormViewHelper's errorClass value, currently 'f3-form-error'		
Description			

This should be renamed to flow-form-error IMO, and the

    $this->registerArgument('errorClass', 'string', 'CSS class to set if there are errors for this view helper', FALSE, 'f3-form-error');

is currently spread manually in every concrete ViewHelper's initializeArguments method, better place would be \TYPO3\Fluid\ViewHelpers\Form\AbstractFormFieldViewHelper IMO
