[BUGFIX] Using files in eID results in fatal error

In TYPO3_MODE == 'FE' we attached language overlays for file metadata via an Signal in the MetaDataRepository. Within this signal the methods of the PageRepository in \$GLOBALS['TSFE'] are used to do the actual language overlay.

When using eID the Frontend is not initialized. When creating file objects in eID these functions are accessed on non-objects which obviously leads to a fatal error.

As a result the registration of the Slot is extended to not register itself in case of eID requests.

Resolves: #54232

Releases: 6.2
