[BUGFIX] Access to sys\_files is incompatible to fe\_access checks

The system extension filemetadata adds access restriction fields for selecting frontend user groups as known from tt\_content or pages. Behind the scenes of the TCEform this relation is stored in a MM table which is incompatible to the usual access checks.

In addition a opposite relation is added to fe\_groups which queries all files to show in a selector.

This change removes the MM table and reconfigures the fe\_groups field in the same way as it is done for tt\_content and pages.

Resolves: #54236

Resolves: #54237

Releases: 6.2
