### History

#1 - 2013-12-12 12:06 - Christian Müller

Do you have more debug information about it? Like entries from Data/Logs/System\_Development.log or the php error log?

| all files writable for webserver user

This might not be sufficient if you for example ran the flow command on the command line it will create cache folders with the permissions of that user...

**#2 - 2013-12-12 12:07 - Christian Müller**

- Status changed from New to Needs Feedback

**#3 - 2013-12-13 13:05 - Bastian Waidelich**

- Parent task set to #54392

**#4 - 2013-12-13 20:12 - Christopher Hlubek**

I think it's a different problem, also my installation doesn't have a file

Data/Temporary/Development/Cache/Code/Flow\_Object\_Classes/TYPO3\_Flow\_Error\_Exception.php so that seems correct, because it's not proxied.

The class loader seems to have an issue because the warning is not converted to an exception in the SimpleFileBackend. This can be caused by the error handler (\TYPO3\FLOW\Error\ErrorHandler) that was not registered to handle PHP errors.

**#5 - 2014-01-19 18:14 - Krzysztof Daniel**

Same for me on mac, with php 5.4.22.

When I use php 5.3 this error is not appearing. Can it be specific to some new setting in php 5.4 ?

**#6 - 2014-01-20 09:27 - Krzysztof Daniel**

It is not me who submitted, but I can answer #1 question:

There is nothing in logs and exception file is not created. Noting really useful.

Additional info that might help:

- Same happening on pure flow - so not Neos related.

- \TYPO3\FLOW\Error\ErrorHandler is registered as error handler and it is processing errors (checked with some var\_dumps ;) )

**#7 - 2014-10-02 11:37 - Philipp Hanebrink**

- Status changed from Needs Feedback to Closed

Moved to Jira: <https://jira.typo3.org/browse/NEOS-505>
