I'm experiencing the same behavior. Traced it down to the file 'upload.js' in package 'TYPO3.Media' line 65:

```
$('.asset-list').on('click', '.asset', function(e) {  
    window.parent TYPO3MediaBrowserCallbacks.assetChosen($(this).attr('data-asset-identifier'));
```

Looks like the 'asset-identifier' data attribute in the thumbnail view is placed on the link inside the 'li.asset' while the list view places the 'asset-identifier' and the class 'asset' both on the '<tr>'.

Possible solution would be to modify the 'ThumbnailView.html' and place the class 'asset' on the link.
