

TYPO3 Flow Base Distribution - Bug # 54403

Status:	New	Priority:	Should have
Author:	Stephen Bungert	Category:	
Created:	2013-12-13	Assigned To:	
Updated:	2013-12-13	Due date:	
Affected Flow version: Flow 2.0.0			
Subject:	Resources remade when parent record updated		
Description			
<p>I have a book record, the book has an image record and this has a resource record.</p> <p>Everytime I update my book the image's resource is re-made, a new resource record is created.</p> <p>Here is the fluid template for the image fields</p> <p>https://gist.github.com/riscos/7949892</p> <p>in TYPO3\Flow\Resource\ResourceTypeConverter, a new Resource object is created using the submitted \$source['submittedFile']['filename'] and \$source['submittedFile']['resourcePointer']</p> <p>These properties are created by the fluid file VH. If the actual file upload field is empty but these properties are there, shouldn't the resource object be returned from the resource repository instead of just creating a new resource?</p> <p>The problem is gone if the resource file input is not in my form. I would like to keep the file input so that users can change the image. Surely if this file input is empty the resource should not be remade? The only alternative I see is, if there is a resource, don't show an upload input and make people delete the old file and save the book before letting them upload a new file.</p>
