Subject:	FAL: Folder not found and dockheader menu broken		
Description	<p>Hi,</p> <p>i had folder with one file inside. To be able to remove this folder (with current user settings) i had to remove first file than folder. I have deleted file than folder. After folder was deleted i have 2 messages:</p> <p>Success: Fodler deletred and Error: Folder not found</p> <p>I think that if folder what was opened is deleted user shoudl be redirected to parent to avoid this "Folder not found" message.</p> <p>Also take a look at dockheader menu - there are only markers displayed but not any html element.</p> <p>See attached file.</p>

[TASK] Deleting currently opened folder in filelist results in error

When you have a folder opened in the filelist and then delete it via the folder-tree the file-module shows an error after its reload.

This patch checks for existence of the folder before it is created. If it is not existent it checks wether the parent folder exists and is accessible. If, so the parent folder will be shown instead.

If the parent folder is not accessible the usual exception is thrown.

Releases: 6.2

Resolves: #54554
