Revision 46574717 - 2014-02-02 16:38 - Oliver Hader

[TASK] Add functional test cases to DataHandler (live)

This change-set adds new functional tests for the DataHandler to ensure the correct behaviour in the Live Workspace. The difference to current functional tests is, that here a more

complete picture is checked in the database instead of only particular ids and values.

The tests use a DataSet, which is basically only a CSV file that hold the record values for required tables. These CSV files can easily be modified by any spreadsheet application. The "Scenario" DataSets are used to define the scenario each test case is based on - the "Assertion" DataSets are used to acutally assert that the correct processing was done in the DataHandler.
