Sprint Focus:			
Subject:	FAL links in RTE not translated when link has rel-Attribute		
Description	<p>I have several image links (<a> Tags) in a RTE text element. These links have FAL references which look like <i>?file:1234</i>. They correctly get translated to the real URL when the page is rendered.</p> <p>As soon as I manually add a rel-Attribute to these links the FAL reference does no longer gets translated but stays at <i>?file:1234</i> when the page has been rendered.</p> <p>This looks like a bug to me, but I'm not exactly sure if this bug is related to FAL or RTE.</p> <p>The only workaround for this bug is to not use FAL links but use fixed urls instead.</p>

[BUGFIX] FAL links in RTE not transformed when link has rel attribute

Problem: When the RTE inserts the link, the href looks like <http://somedomain/?file:1234>. If a rel attribute is present, the link is not transformed into a typolink on the way to the database. However, the href attribute is not transformed, as it should, into a normal file url. It should because the a-tag will be rendered as is in the frontend.

Solution: When a link is not be transformed into a typolink, transform the href into a normal file url.

Resolves: #54944

Release: 6.2

When the RTE inserts the link, the href looks like `http://somedomain/?file:1234`.

If a `rel` attribute is present, the link is not transformed into a TYPO3 link on the way to the database. However, the `href` attribute is not transformed, as it should, into a normal file url. It should because the `a`-tag will be rendered as is in the frontend.

As soon as I manually add a rel-Attribute to these links the FAL reference does no longer gets translated but stays at ?file:1234 when the page has been rendered.

You don't need to enter those rel attributes manually. You can configure

`RTE.default.buttons.link.relAttribute.enabled = 1`

in Page TSConfig. An additional field will be presented in the element browser for the rel attribute.
