Subject:	Namespaces are not available for the definition of processor methods		
Description			
Currently a processor method can either be within the default namespace or must be specified with the full component name: ...value << 1.wrap('x', 'y') ...value << 1.T3P_CMS_TypoScript_Processors->wrap('x', 'y')			
However, it should be possible referring to a namespace: ...value << 1.mynamespace:myFunction()
