

## Core - Bug # 55174

<b>Status:</b>	Resolved	<b>Priority:</b>	Should have
<b>Author:</b>	Thomas Skierlo	<b>Category:</b>	Indexed Search
<b>Created:</b>	2014-01-20	<b>Assigned To:</b>	
<b>Updated:</b>	2014-03-03	<b>Due date:</b>	
<b>TYPO3 Version:</b>	6.2		
<b>PHP Version:</b>	5.3		
<b>Complexity:</b>			
<b>Is Regression:</b>	No		
<b>Sprint Focus:</b>			
<b>Subject:</b>	Indexed Search broken on 6.2		
<b>Description</b>			
<p>I have two 6.2 installations,</p> <p>First is a migrated site from 6.1.6 to 6.2.0beta3 using collation utf8_general_ci. Indexed Search is working here.</p> <p>Second site is brand new (lastest HEAD, fresh install), using collation utf8_unicode_ci. Except of the search header, nothing else is rendered here.</p> <p>Please notice the different collations for both sides.</p> <p>Both sites use the very same setup. While I can see that something has been included in TSOB of the first site:</p> <pre>&lt;!-- Plugin inserted: [begin] --&gt; [tt_content.list.20.indexed_search] &lt;!-- Plugin inserted: [end] --&gt;</pre> <p>Besides that, following property exists here:</p> <pre>tt_content.list.20.indexed_search &lt; plugin.tx_indexedsearch</pre> <p>The same looks different for the second site:</p> <pre>Content Object "" does not exist</pre> <p>Here the property tt_content.list.20.indexed_search does not exist. Instead the default is taken, which doesn't exist either.</p>

[TASK] Make TS content templates more flexible

If an extension used static content ID 43 (content default),  
it also added itself (during each runtime of ext\_localconf.php)  
to all available content blocks.

The original way is problematic as an extension that

provides content templates may be included after an extension that wants to add itself after all content templates.

This is now more confusing as the package manager resolves the ordering of extensions and now, CSS Styled Content gets loaded after felogin and indexed\_search.

To resolve this problem completely, the additional TypoScript for each "contentRenderingTemplate", a TS template that provides default content renderings, is added to one global default TypoScript and is only merged at the TemplateService class.

Therefore the extension loading ordering does not matter anymore.

### #1 - 2014-01-31 13:41 - Thomas Skierlo

Expected the problem to be in relation with my 'advanced' collation (utf8\_unicode\_ci) first. But it isn't. Started a blank install (utf8\_general\_ci) with yesterdays HEAD and I'm getting the very same error.

No visible or logged errors, and no plugin showing up on the search page.

Guys and gals - this thing is core stuff!

### #2 - 2014-02-06 23:56 - Markus Klein

Just an idea while reading this: Did you include the static TS templates of indexed\_search?

### #3 - 2014-02-08 12:02 - Thomas Skierlo

Well, at least I guess so. Since IS is using the most rotten way to include it (by means of ext\_typoscript\_setup.txt) there really should be no way of omitting the default static template. Anyhow, my issues definitely are related to a missing template, since TSOB fails to present one.

Or are we talking about other requirements on 6.2, which possibly are not documented now? Like the installation of some extension to replace former core stuff? Do I need to install ext:statictemplates to get it working? Checked documentation multiple times, but couldn't find any hint on setting it up in a different way than I did.

Again: The upgraded variant (6.1.6 -> 6.2.0beta3) works properly (at least in terms of searching). The fresh install 6.2.0HEAD (tried 7 daily builds since beta3) fails to include the template. And it does so silently, no errors or logging, except the missing object in TSOB. Indexing works with both variants.

Could you please clarify the term "TS templates of indexed\_search?"

- Status changed from New to Needs Feedback

The problem might be (once again) the order or loading of the extensions and indexed\_search being loaded before css\_styled\_content. Same happened to felogin (#55557). Benni wanted to think about a solution to that problem that was always there, but never before hit us, because the loading order of extensions was usually defined by the order you installed them (and usually one installs css\_styled\_content before indexed\_search).

@Thomas, as a workaround and to see if this is really the problem, try to set the dependencies of indexed\_search to css\_styled\_content just in the same way Benni proposed in <https://review.typo3.org/#/c/27233/> to see if this solves your problem.

- Status changed from Needs Feedback to Under Review

Patch set 1 for branch **master** of project **Packages/TYPO3.CMS** has been pushed to the review server.

It is available at <https://review.typo3.org/27587>

**#6 - 2014-02-13 11:31 - Thomas Skierlo**

- File is\_62\_ok.jpg added

Success!!

Adding the dependency and clearing the cache alone doesn't solve it. BUT doing the same while disabling and re-enabling indexed\_search cures it instantly.

There's one more glitch (see screenshot), but except that, everything is working fine now, including advanced search and search rules in a modal window.

```
caller TYPO3\CMS\Core\Database\DatabaseConnection::exec_INSERTQuery
ERROR Column 'cookie' cannot be null
```

The remaining issue looks like peanuts to me.

Checked felogin as well (without applying the patch), and it does not show any issues (tried beta3 as well as yesterday's HEAD).
