[TASK] Visualize nested data structures in workspace module

The current workspace module only has two levels (page and the accordant records). Nested record sets like tt_content -> sys_file_reference (any "text with image" content element) are not recognized as dependent and need to be published separately.

The GridDataService is extended to determine the the accordant nested record sets and provides additional data for parent and child scenarios. The ExtJS view components are extended to take care of nested record sets and to handle expand and collapse events on these kind of record collections.

Resolves: #55349

Releases: 6.2
