Subject:	f:form.select in backend module toggles the menu onclick		
Description			
<p>Hi TYPO3 Neos devs,</p> <p>i've discovered a problem with the f:form.select tag, if you use it within a backend module (fresh install of Neos 1.0.1). Because whenever you click on the generated dropdown, the left menu slides in. This is kind of annoying, because in my case the menu slides over the select element.</p> <p>You can still click the options though.</p> <p>As i am not particularly pro in javascript i could not find the bug myself, but i think that select elements in the backend are a common usecase, so i this is a "should have" bug.</p> <p>Regards Maxi</p>

I can confirm this issue. Each SELECT element click triggers also side menu (tested now also on 1.0.2)
