<b>Sprint Focus:</b>			
<b>Subject:</b>	[Extension Manager] - PackageStates.php empty if incompatible extension is installed		
<b>Description</b>			
<p>I've got several projects already running on TYPO3 6.2beta (still under development). Since beta1 I'm experiencing an annoying problem. As soon as you install a "problematic" extension the new extension manager throws some kind of exception/ PHP error (always something different - I'll try to gather more information when the problem occurs again). When this happens the PackageStates.php is cleaned and looks like the following snippet:</p> <pre>&lt;?php # PackageStates.php  # This file is maintained by Flow's package management. Although you can edit it # manually, you should rather use the command line commands for maintaining packages. # You'll find detailed information about the typo3.flow:package:* commands in their # respective help screens.  # This file will be regenerated automatically if it doesn't exist. Deleting this file # should, however, never become necessary if you use the package commands.  return array (     'packages' =&gt;         array (             'version' =&gt; 4,         )     ?&gt;</pre> <p>Yesterday this happened to me again. I've got a fresh CMS 6.2beta4 and tried to install the current extension_builder extension.</p>

### History

#1 - 2014-01-31 16:41 - Andrea Herzog-Kienast

- Target version set to 6.2.0

Same problem occurs while uninstalling static\_info\_tables (newest version from forge). Seems not only to be a problem of installing, Björn. So as a workaraoud - save the PackageStates.php before doing something in the EM. If it crashes, you can load it up again. This works, if you uninstalled extensions.

- *Assigned To set to Thomas Maroschik*

**#3 - 2014-02-03 10:21 - Bjoern Jacob**

I think the problem is not related to a specific extension. It happened the other day with one of my own extensions freshly build with the extension\_builder on a 6.1 installation. But you're right Andrea. Now we put this file in our project repository among all the theming stuff and realurl\_conf.php etc.

- *Status changed from New to Closed*

- *% Done changed from 0 to 100*

This one should be solved by <https://review.typo3.org/27101>

If it isn't please say so and I'll reopen this issue.
