Subject:	Accessing the root folder of a file mount is not possible for non-admins

Description

The change "[!!!][TASK] Driver API has too many crosscutting concerns" commit:f83eddd5027b74d7f4d28a845521bff3b2dd603d breaks filemounts for non-admins (or changes the configuration needed?). After this change, a non-admin cannot access the root folder of a filemount. Sub-folders of a filemount work.

The error message is: "You are not allowed to access the given folder."

Revision 2015d65f - 2014-01-31 10:16 - Alexander Stehlik

[BUGFIX] Allow access to filemount directories

Currently a backend user can only access files within filemounts
but not the filemount directory itself.

After that fix LocalDriver::isWithin returns true, if the folder
itself is requested.

Applied in changeset commit:2015d65fcca95202766ffc2734235c0b6c8c5cd6.

#11 - 2014-02-06 14:58 - Markus Kasten

Since the patch was committed, non-admin users can't access files in filemounts that are using the folder of a filestorage. Filemounts using a subfolder of a filestorage are accessible for non-admin users.

I have a filemount "fileadmin-all" that is using the fileadmin storage and the root folder "/". When the filemount uses for example "/test/" as the folder, everythings seems to work fine.

When reverting commit commit:2015d65fcca95202766ffc2734235c0b6c8c5cd6, everything (from my point of view) is working fine again.

Can this behaviour be confirmed? Tested with latest master (commit:179675e1f442cf75babe7a921bc874cc714b0ec6) and beta5.

#12 - 2014-02-06 15:42 - Alexander Stehlik

You're right. The root folder is only accessible in read-only mode when I apply the patch. Really strange.

#13 - 2014-02-06 16:32 - Alexander Stehlik

@Markus: Can you please test and review #55740?

#14 - 2014-02-06 16:50 - Markus Kasten

The patch in #55740 seems to fix the problem for me.
