Subject:	Dynamic usage of "selector" in inspector		

Description

Many selectors can consist of dynamic content: * Specific nodetypes * tags * objects/models from your own package/backend module * and many more..

Somehow, this could be dynamicly possible within configuration. This is an example, and hopefully be usable for discussion

```
    properties:
        selectorElementInTheInspector:
            type: [IM IN DOUBT HERE, AS IT CAN BE ANYTHING. MAYBE A PROXY?]
            ui:
                label: 'Tags'
                reloadIfChanged: true
                inspector:
                    editor: TYPO3.Neos/Inspector/Editors/SelectBoxEditor
                    editorOptions:
                        placeholder: 'Select the tags identifier'
                        multipleItems: TRUE // IF ITS POSSIBLE TO CHOOSE MULTIPLE ITEMS
                        displaySelectedItems: TRUE // IF DISPLAYED ITEMS SHOULD BE DISPLAYED (EX. tags)
                        [SOMEHOW CONFIGURATE THE DYNAMIC PARTS (nodeTypes, domain object etc.)
                        values:
                            '': null
                            contact-form:
                                label: 'Contact form'
```

History

#1 - 2014-10-03 15:20 - Lienhart Woitok

- Assigned To set to Lienhart Woitok

#2 - 2014-10-03 15:21 - Lienhart Woitok

- Status changed from New to Closed

- Assigned To deleted (Lienhart Woitok)

Moved to JIRA: https://jira.typo3.org/browse/NEOS-529
