TYPO3.Neos - Bug # 55492

Status:	Resolved	**Priority:**	Must have
Author:	Dominic Garms	**Category:**	
Created:	2014-01-31	**Assigned To:**	Bastian Waidelich
Updated:	2014-01-31	**Due date:**	
Subject:	Disabling the defaultUriSuffix breaks routing		

Description

Hello,
 	
 after creating my content I tried to change the routing behaviour in Configuration/Routes.yaml:
     'defaultUriSuffix': '.html' => 'defaultUriSuffix': ''
 	
 After this change all subpages are not accessible in BE and FE. I cleared the caches with hard reset of removing temporary files but the result stays the same. Following error shows up inside the BE:
 	
     Could not read page metadata from response. Please open the location (...) outside the Neos backend.
 	
 Same behaviour on Linux shared hosting and local Mac environment.
 	
 Regards
 Dominic

Revision 5f952cb2 - 2014-01-31 11:14 - Bastian Waidelich

[BUGFIX] Remove obsolete route that might break routing

This removes the frontend route "content with URI suffix and type"
that could break routing in frontend and backend in certain
circumstances.

Background:
This route was meant to support custom rendering formats (similar to
the ``typeNum`` feature in TYPO3 CMS). But apparently this is currently
not used anywhere in the code and the same can be achieved with custom
routes and/or the ``{@format}`` suffix.
Since support for configurable URI suffixes (introduced with
I14c8a98f341fbc312c57fee44cd383271778e57b) it is possible to disable
the ".html" suffix from all Neos routes. But with that change the
route mentioned above incorreclty matches all pages in the second
level (e.g. "foo/bar").

Revision eaaa9aef - 2014-02-17 13:33 - Bastian Waidelich

[!!!][BUGFIX] Only accepts URLs with the configured URI suffix

This change removes two obsolete routes and adjusts the
``FrontendNodeRoutePartHandler`` so that it matches the full node path.

Background:
The route "Content with some format" accepted all URLs in the format
``{node}.{@format}`` which lead to duplicate content (if your default
suffix is empty and the user appends ".html") and weird errors (if an
arbitrary extension is added to the path, like "some/path.anything").

Besides this change simplifies the ``FrontendNodeRoutePartHandler`` so
that it does not ignore the ``splitString`` option if no dot could be
found in the request path.

This is a breaking change if you relied on the fact that any format
suffix is accepted by Neos.
If you provide a custom format (for example "ics") you should register
a custom route for it in your package::

```
-
    name:  'ICS'
    uriPattern: '{node}.ics'
    defaults:
      '@package':   'TYPO3.Neos'
      '@controller': 'Frontend\Node'
      '@action':    'show'
      '@format':    'ics'
    routeParts:
      'node':
        handler:    'TYPO3\Neos\Routing\FrontendNodeRoutePartHandler'
```

Hey Dominic,

I doubt that this is related to a routing issue. Did you revert the Routes.yaml change and does that fix the error??

#2 - 2014-01-31 09:48 - Dominic Garms

Hi Bastian,

yes I am absolutely sure. I changed back to '.html' and everything works as expected.

Mh, this is strange.. This error is shown if the div "#neos-page-metainformation" is not on the page.. Could you debug a bit more or provide some more details?

Are you on skype (mine: dohomi)? I could give you temporary access to the project if you like.
