Subject:	Highlight fields of an useCombination again		

Description
Hello UI-Team, there was a time where fields of a useCombination construct were highlighted with a red border. I don't know when, but this highlighning was removed, but the class for the related record is still there. As discussed here on CodeSprint CGN we and Olli think it was a good task to add highlightning again. Stefan

[BUGFIX] IRRE bidirectional relation not highlighted

Currently the user is not able to recognize that he is working on
record relations. These records may be used in several places in
the system and the user should be aware of that specific behaviour.

In previous versions of TYPO3 there has been a wrapper which
highlighted input fields, but had no explanation. This was removed
later. To restore the functionality and make it understandable to the
user why he should edit the fields wisely, the wrapper has been replaced
by a flash message. This explains to the user what happens when the
record gets changed.
