Core - Bug # 55714

Status:	Resolved	**Priority:**	Should have
Author:	Stefan Neufeind	**Category:**	File Abstraction Layer (FAL)
Created:	2014-02-06	**Assigned To:**	Georg Ringer
Updated:	2015-07-19	**Due date:**	
TYPO3 Version:	6.2		
PHP Version:			
Complexity:			
Is Regression:	No		
Sprint Focus:			
Subject:	Not available storages assigned to user shouldn't cause "hard failure"		

Description

It's been mentioned on the German TYPO3-list yesterday/today that a user receives

Oops, an error occurred!
Could not find row with uid "2" in table sys_file_storage More information regarding this error might be available online.

when logging in. It was assumed that there was a storage with uid 2 assigned to the user and afterwards deleted.

I see two problems here:
1) Once the storage is deleted you might not be able to remove the reference in the user-settings anymore. Or would it go away if you open and just save the user again?
2) Can we / do we want to avoid the "hard" failure for the user right after login? Maybe just show a notice or so?

to 1. from my understanding. If you edit a user record the available storage get added to the field. This differes from what is stored in the database. On saving the unavailable record gets removed from the selection in the user record.
