Core - Bug # 55768

Status:	Resolved	**Priority:**	Should have
Author:	Thorsten Kahler	**Category:**	Pagetree
Created:	2014-02-07	**Assigned To:**	Thorsten Kahler
Updated:	2014-03-31	**Due date:**	

TYPO3 Version:	6.2
PHP Version:	
Complexity:	
Is Regression:	Yes
Sprint Focus:	
Subject:	Drag & drop in Workspaces moves live page

Description

\TYPO3\CMS\Backend\Tree\Pagetree\Commands::createNode() unnecessarily triggers a move operation when creating a new page. This already lead to following bugs:

  - #33104 (creating page after moved page)
  - #39820 (comparison ignoring datatype)

The "solution" for #33104 caused this new bug when moving pages in a workspace via drag & drop: pages, which are positioned below a page that has been moved in that workspace before, cause their live versions to be moved, too.

The move operation in \TYPO3\CMS\Backend\Tree\Pagetree\Commands::createNode() can be dropped completely, because DataHandler does all necessary steps when using a negative pid in the datamap.

Looks like the proper solution to the issue. Thanks for working that out!

#4 - 2014-03-31 16:11 - Joern Hartmann

I am experiencing a similar issue in Typo3 4.5.32 LTS. Moving a page in a workspace sometimes affects the live page as well. The patch which has been attached to this issue cannot be applied to 4.5. Any ideas on what could be wrong in 4.5?
