[TASK] file_list: use t3-table & semantic HTML in localization

Brings the central table mark-up and style definition "t3-table" to file_list backend module. Thanks to the unification few lines of duplicated css definitions can be tossed.

Also moves the localization icons into the html table row. This is a semantic clean-up and gives every file entry one table row.
-> Buttons can be added to title cell since cell is always visible.

Note: RequireJS module is moved to EXT: file_list.

By hiding the flag icons from within html right away there is no flashing between render & ready (JS hide()).
