| **Subject:** | New MenuImplementation does not give current state to homepage | | |

| **Description** |
|---|

For the usecase where the homepage is a shortcut to the parent page (with content on the site root) the new MenuImplementation gives unexpected states:

**If on homepage**
  - All menu items have a normal state

**If on subpage**
  - Homepage has state 'active' (as the homepage shortcut points to the siteroot which is in the rootline)
  - The subpage currently in the rootline (for example 'about us') also has active state

I'm now sending a patch that fixes the first situation (and as such giving current state to the homepage if the homepage is opened). The second usecase will have to be done with conditions in the template for now.

## Associated revisions

**Revision 2be0a4b5 - 2014-02-27 12:29 - Rens Admiraal**

[BUGFIX] Shortcut to siteroot has no active state

The new menu implementation returns a state normal for nodes equal to the siteroot. This prevents a menu which contains a shortcut to the homepage to render an active state.

A menu could now render an active state on the shortcut to the homepage by for example using a custom node type for the homepage and adding the following condition:

```
<f:if condition="{item.node.nodeType.name}  'My.Package:Homepage'">
    <f:then>
        <li class="{f:if(condition:'{item.state}\'current\", then:'active')}">
            <neos:link.node node="{item.node}">{item.label}</neos:link.node>
        </li>
    </f:then>
    <f:else>
        ...
    </f:else>
</f:if>
```
