Updated:	2014-11-19	Due date:			
TYPO3 Version:	6.2				
PHP Version:	5.4				
Complexity:					
Is Regression:	No				
Sprint Focus:					
Subject:	Check for symlink on index.php should be a warning				
Description					
<p>The Install Tool / Environment Check for index.php should be a warning not an error.</p> <p>There are hosting companies outside which allow symlinks only on directories but not on files.</p> <p>So this error message is misleading:</p> <p>Path /index.php is not a link</p> <p>The target /index.php should be a link, but is of type file. This can not be fixed. Please investigate.</p> <p>Please make it a warning instead.</p>
