

## Core - Bug # 56028

<b>Status:</b>	Closed	<b>Priority:</b>	Should have		
<b>Author:</b>	d.ros no-lastname-given	<b>Category:</b>			
<b>Created:</b>	2014-02-17	<b>Assigned To:</b>			
<b>Updated:</b>	2015-06-30	<b>Due date:</b>			
<b>TYPO3 Version:</b>	6.2				
<b>PHP Version:</b>	5.4				
<b>Complexity:</b>					
<b>Is Regression:</b>	No				
<b>Sprint Focus:</b>					
<b>Subject:</b>	Installtool "fileCreateMask" and "folderCreateMask" on first install wizard screen				
<b>Description</b>					
<b>Problem</b>					
If you install TYPO3 from scratch with installwizard and have different file and foldermask on your server as mandatory against the builtin ones (e.g. server has suphp) the installation get stuck at a very early stage.					
<b>Solution</b>					
Bring those to fields to the wizard at the point where the first time the db settings are made. So we can avoid any issues with the masks.

### History

#### #1 - 2014-03-12 17:46 - Robert Vock

When installing on my Dev-Machine under OS X, the Install-Tool breaks because it generates files/folders which are not accessible by the webserver:

Using the old default 0755 (or a stricter 0750) works for me. But this is definitely a breaking change for many servers and there was no Info in the News-Posts about the Betas.

Note: Using php-fpm which runs as another user as Apache.

#### #2 - 2015-03-24 11:50 - Markus Klein

- Status changed from New to Needs Feedback
- Target version deleted (6.2.0)

Is this still an issue?

If so, can you provide a patch?

#### #3 - 2015-06-30 16:49 - Alexander Opitz

- Status changed from Needs Feedback to Closed
