[FEATURE] Add new way to register a TCA wizard

Wizards used to be registered by defining a script path

to an entry script. Since we now aim to reduce

the number of entry scripts, wizards should be called

through mod.php and be registered accordingly.

However with the additional requirement of adding

CSRF protection for all mod.php calls, we cannot

hard code the script URLs for wizards any more.

Instead BackendUtility::getModuleUrl should be used,

which adds the CSRF protection token.

Since this token depends on the current user session

and TCA might be cached, we need a new way to register

a wizard by just specifying the module name in TCA.

FormEngine should then take care to call

BackendUtility::getModuleUrl()

Resolves: #56268

Releases: 6.2
