<b>Sprint Focus:</b>			
<b>Subject:</b>	Remove manual array calculation in Locales and put the arrays to the class directly		
<b>Description</b>	the constructor calculates the same stuff over and over again on __construct() each request.... We are talking about a small count of vlaues: hardcode them		

### History

#### #1 - 2014-09-07 14:42 - Stephan Großberndt

You are talking about TYPO3\CMS\Core\Localization\Locales?

It implements \TYPO3\CMS\Core\SingletonInterface, initialize() it is only called once per request.

`$instance->languages` and `$instance->localeDependencies` cannot be put in the class because of user-defined locales.

The only optimization possible would be to remove

```
$instance->isoMapping = array_flip($instance->isoReverseMapping);
```

and put the `"->isoMapping"` array into the class hardcoded.

Is this what you intended with this bug report?

#### #2 - 2015-03-11 23:57 - Stephan Großberndt

Steffen, can you please explain what was intended here?
