Revision 740b4435 - 2014-03-22 01:55 - Oliver Hader

[BUGFIX] Invalid relations of IRRE records in workspaces

- general -> always use live id as pointer value
- create records -> automatically fill placeholder pointers
- copy records -> currently leads to problems with sorting
- move records -> follow and create child move placeholders
- delete records -> forward delete data in copy(!) process
- ReferenceIndex needs to hold the most specific relations
 - since the CommandMap handler is based on this information

- RelationHandler is extended for IRRE references to fetch the live default parent pointer automatically (this new behaviour can be disabled by public methods for each RelationHandler instance)
- The method version_swap_procBasedOnFieldType of the version DataHandlerHook is completely removed since IRRE records are now referenced using the live default parent pointer value
- UserTSconfig property options.workspaces.swapMode is set to "pages" per default - thus, if a page gets published all accordant records on that page are published as well

Resolves: #56376

Releases: 6.2
