[BUGFIX] Remove superflous check in getModuleUrl

There is a check in getModuleUrl that checks access rights to modules and returns false if this is not the case.

However access rights are checked in each module independently anyway.

So we remove this check here.

You dont have the possibility to allow the module

wizard_element_browser

to a group

So its not possible to enable the element browser except for admin users

trace

1)

```
$moduleId = BackendUtility::getModuleUrl('wizard_element_browser') . '&mode=';
```

2)

```
if (!$GLOBALS['BE_USER']->check('modules', $moduleName)) {  
    return FALSE;  
}
```

3)

```
if (isset($this->groupData[$type])) {  
    if ($this->isAdmin() || GeneralUtility::inList($this->groupData[$type], $value)) {  
        return TRUE;  
    }  
}  
return FALSE;
```

Either you dont return false if the key is no actual module OR you add the wizard_element_browser to the modList, i wouldnt do that, you allready have so much to configure for backend users to be actual able to do SOMETHing.

####

BTW:

when adding wizard_element_browser to the list of allowed modules (be_groups::groupsMods) you can workaround this bug.
