

Core - Bug # 56882

Status:	Resolved	Priority:	Should have
Author:	Tymoteusz Motylewski	Category:	IRRE
Created:	2014-03-13	Assigned To:	
Updated:	2014-10-15	Due date:	
TYPO3 Version:	6.2		
PHP Version:			
Complexity:			
Is Regression:	No		
Sprint Focus:			
Subject:	Can not translate IRRE elements		
Description			
Translation of irre elements is buggy.			
Scenario 1			
IRRE tutorial is installed			
- create new CE,			
- go to "IRRE" tab			
- create new irre element			
- save			
localize this element to other language			
=> CE is localized, but irre elements are not			
Scenario2			
Create plugin with FAL field in flexform			
- create CE of this plugin			
- add images to the FAL field			
- save			
- translate this element			
=> images are localized, but an additional row i shown on the list of images			
When testing scenario 2 with flv files instead of images, no records were correctly localized

Revision 5ee67bca - 2014-10-15 19:24 - Daniel Alder

[BUGFIX] Show correct number of inline records defined in flexform

getRelatedRecordsArray() is expecting comma separated list of record ids

Before this patch the full flexform xml was passed.

Now we detect whether a field is a flexform and try to extract the correct field values from it.

Resolves: #56882

Releases: master, 6.2

History

#1 - 2014-03-18 10:18 - Oliver Hader

- Status changed from New to Needs Feedback

Please add the TCA field configuration for the relative parents

#2 - 2014-03-18 10:27 - Oliver Hader

Please use https://git.typo3.org/Packages/TYPO3.CMS.git/tree/HEAD:typo3/sysex/ext/core/Tests/Functional/Fixtures/Extensions/irre_tutorial (e.g. linking that from the Core sources to your typo3conf/ext/ directory), the irre_tutorial in TER or SVN is outdated for 6.2 (new version after 6.2 release).

#3 - 2014-03-18 10:29 - Oliver Hader

- File test_case_1.png added

Could not reproduce your first test case (see test_case_1.png).

I did not check the FlexForm issue, but most likely there are problems I guess...

- Category set to IRRE

#5 - 2014-03-18 12:17 - Tymoteusz Motylewski

- File *scenario1_newlrre_tutorial.png* added

- File *scenario1_newlrre2.png* added

I've just tested it again with newest master version and lrre_tutorial from core.

I've attached a screenshot (left side is a original record (english), right side is a translated record).

I've added new record on the left side, by clicking "create new under IRRE".

Problems:

A) if you collapse child records, and then close the CE and open it again, you got different views depending on which record you expand first (the 1nff or IRRE). If you expand the 1nff first, then title is show correctly, but in IRRE "general" and "visibility" tabs are empty.

If you expand IRRE element first, then it is shown correctly, but the 1nff record has empty title

B) after translating the parent record (CE) there is a record visible in the 1nff, but it is missing in the IRRE section.

see right side of the screenshot

C) After adding second record to the english CE, and saving it, there are some problems in the translated CE

see screenshot *scenario1_newlrre2.png*

notice that "Changed in original translation:" contains text

"Wellness Well-Being Hotel Rosengarten"

which is not correct - this is a title of the Hotel record with id 1, not the one associated with English CE.

Also "Localize all records" on the IRRE section doesn't work.

If you translate the record by clicking "Localize all records" in 1nff section, then record is correctly translated, but on the lrre section it doesn't show up.

- File *scenario2_mediacyenter.png* added

- File *scenario2_B_mediacyenter.png* added

- File *mediacyenter.zip* added

SCENARIO2:

I've attached test extension.

A) screenshot *scenario2_mediacyenter.png*

1. Create new CE "plugin"
2. Select "mediacyenter" plugin
3. Attach 2 images in the plugin flex form
4. translate record using "copy default content elements"
5. You'll get a nice exception

#1317178794: No fileusage (sys_file_reference) found for given UID. (More information)

screenshot attached (notice the getFileReferenceObject("2") call - it takes number of related images as a file reference. If we had 3 images, then it will call getFileReferenceObject("3"))

6. reload the page, edit translated record,
- only one image will be visible, but grayed out. The "localize" button is not working.

B) screenshot *scenario2_B_mediacyenter.png*

1. Create new CE "plugin"
2. Select "mediacyenter" plugin
3. Attach 3 images in the plugin flex form and one flv file

4. translate record using "Language: " selectbox on the top of the site, choose "Dansk NEW" from this selectbox
5. In the translated record you will get completely wrong images, see right side of the screenshot.

- File *scenario2_A_exception.png* added

attach screenshot of the exception from scenario 2A

#8 - 2014-07-10 14:59 - Alexander Opitz

Hi,

does this issue still exist in 6.2.4?

#9 - 2014-07-30 11:44 - Tymoteusz Motylewski

- File *scenario2_new.png* added

I've retested the issue with the recent master (Sun Jul 27 e172269f8db8720083c1e74eca03d9662a331185).
It is better, but the issue is NOT yet resolved.

Scenario 2:

A)

no exception any more, but after translating the record there are additional images in the localized record (see *scenario2_new.png*)

B)

works the same way as A) now

Scenario 2:

A)

no exception any more, but after translating the record there are additional images in the localized record (see scenario2_new.png)

B)

works the same way as A) now

Since the function which got the related records didn't expected a flexform xml field (pi_flexform) the ongoing process take the field as 'field with comma separated values'. In addition the 'explode' will be done over the whole xml, which is in 'pi_flexform'. So the result is not an array of IDs only. First and last array records includes the xml definitions. So the related records are incomplete as mentioned in the picture scenario2_new.png

Example:

Inline field used via TCA

Incomming field record: 1,2,3

Inline field used via flexfor

```
<T3FlexForms>
  <data>
    <sheet index="sDEF">
      <language index="IDEF">
        <field index="settings.irre.records">
          <value index="vDEF">1,2,3</value>
        </field>
      </language>
    </sheet>
  </data>
</T3FlexForms>
```

The following patch will take care of this issue

#15 - 2014-09-26 16:00 - Gerrit Code Review
